Want to see 4Mb of Hi-Tech C FAQ and sample source code? http://www.keyghost.com/htpic
(also has tiny device to record keystrokes in hardware on PC)

For Microchip 12C67x, 16C7x, 16F87x and Hi-Tech C

Example C:
#define PIC_CLK 8000000

#include "delay.h"

unsigned int timeout_int, timeout_char;

timeout_char=timeout_char_us(1147);
while(timeout_char-- && (RA1==0)); //wait up to 1147us for port RA1 to go high
// - this is the max timeout

timeout_int=timeout_int_us(491512);
while(timeout_int-- && (RA1==0)); //wait up to 491512us for port RA1 to go high
// - this is the max timeout

dly250n: //delay 250ns
dly1u: //delay 1us
DelayUs(40); //do not do DelayUs(0) or else it bombs :)
DelayUs(255); //max

*/

/*
timeouts:
C code for testing with ints:

        unsigned int timeout;
        timeout=4000;
        PORT_DIRECTION=OUTPUT;
        while(1)
        {
                PORT=1;
                timeout=8000;
                while(timeout-- >= 1); //60ms @ 8Mhz, opt on, 72ms @ 8Mhz, opt off
                PORT=0;
        }

Time taken:    optimisations on:          16cyc/number loop, 8us @ 8Mhz
                optimisations off:         18cyc/number loop, 9us @ 8Mhz
                with extra check ie:        && (RB7==1), +3cyc/number loop, +1.5us @ 8Mhz

C code for testing with chars:

        similar to above

Time taken:    optimisations on:          9cyc/number loop, 4.5us @ 8Mhz
                with extra check ie:        && (RB7==1), +3cyc/number loop, +1.5us @ 8Mhz

Formula:      rough timeout value = (<us desired>/<cycles per loop>) * (PIC_CLK/4.0)

To use:      //for max timeout of 1147us @ 8Mhz
                #define LOOP_CYCLES_CHAR          9 //how
many cycles per loop, optimizations on
                #define timeout_char_us(x)        (unsigned
char)((x/LOOP_CYCLES_CHAR)*(PIC_CLK/4.0))
                unsigned char timeout;
                timeout=timeout_char_us(1147); //max
timeout allowed @ 8Mhz, 573us @ 16Mhz
                while((timeout-- >= 1) && (<extra condition>)); //wait

To use:      //for max 491512us, half sec timeout @ 8Mhz
                #define LOOP_CYCLES_INT          16 //how
many cycles per loop, optimizations on

```

```

int) ((x+LOOP_CYCLES_INT)*(PIC_CLK/4.0))
#define timeout_int_us(x) delay (unsigned
unsigned int timeout;
timeout=timeout_int_us(491512); //max
timeout allowed @ 8Mhz while((timeout-- >= 1) && (<extra condition>)); //wait
*/
#define LOOP_CYCLES_CHAR 9 //how many cycles
per loop, optimizations on
#define timeout_char_us(x) (unsigned char)((x/LOOP_CYCLES_CHAR)*(PIC_CLK/4000000.0))
#define LOOP_CYCLES_INT 16 //how many cycles
per loop, optimizations on
#define timeout_int_us(x) (unsigned int)((x/LOOP_CYCLES_INT)*(PIC_CLK/4000000.0))
#endif

```
